

Healthcare

Our healthcare mission is to provide hospitals, clinicians, and patients with new ways to improve the patient/clinician experience, reduce costs and enhance the operational performance of the healthcare delivery systems.

Adept provides solutions for healthcare organizations to solve business and compliance problems associated with integration, identity and access management, enterprise single-sign on, and data loss prevention. Adept provides consulting services to address gaps that healthcare organizations may have in developing design, strategy, and implementation of comprehensive and optimal solutions in areas of security and data integration. These are tailored to each organization to meet their functional, regulatory and budgetary requirements.

Healthcare providers have a myriad of challenges: maintaining the security of patient data, providing easy access to the multiple systems supporting the medical mission, reducing the cost of IT operations, and optimizing performance.

Intelligent Gateway

Centralized Processing

Map and exchange data collected from numerous distributed points of care, leveraging the core integration platform to confidently communicate patient data in the correct formats.

No matter where messages originate, whether from Point of Care A to Point of Care Z, Intelligent Gateway ensures that each message is processed at a central location. No more transformation logic scattered from site to site within a referring community.

At your central location, patient data is collected, automatically transformed into your desired formats, and communicated to and from the necessary back-end applications.

From data communication to transformation to integrated exchanges, the complete process is monitored proactively and intelligently - allowing you to productively maintain and manage service levels.

Protect your patient data and ensure compliance

- › Comply with laws and regulations regarding patient privacy and protected health information under HIPAA
- › Reduce data loss of sensitive and private patient information and intellectual property
- › Mitigate compliance risks from multiple state data laws

Enhance patient care

- › Provide better care with easy and rapid access to critical information
- › Bring new employees onboard quickly with proper access to systems they need to do their jobs
- › Easier and faster help desk provisioning and password resets
- › Improved customer satisfaction in portal services via self-service management and single sign-on authentication
- › Faster on boarding of employees

Reduce IT costs

- › Server and storage consolidation reduces footprint in tight data centers
- › Reduced power requirements
- › Reduced need for cooling further cuts costs
- › ROI Tools helps you assess savings before beginning project
- › Increased CRM efficiency
- › Reduced cost of directory migration

Healthcare providers need a secure, reliable, and auditable platform to manage access and identity. An identity management solution from Adept will reduce costs and frustrations associated with accessing applications and services to the users of your organization.
