

## Intelligent Gateway

Our healthcare mission is to provide hospitals, clinicians, and patients with new ways to improve the patient/clinician experience, reduce costs and enhance the operational performance of the healthcare delivery systems.

Adept provides solutions for healthcare organizations to solve business and compliance problems associated with integration, identity and access management, enterprise single-sign on, and data loss prevention. Adept provides consulting services to address gaps that healthcare organizations may have in developing design, strategy, and implementation of comprehensive and optimal solutions in areas of security and data integration. These are tailored to each organization to meet their functional, regulatory and budgetary requirements.

Healthcare providers have a myriad of challenges: maintaining the security of patient data, providing easy access to the multiple systems supporting the medical mission, reducing the cost of IT operations, and optimizing performance.

Adept works with healthcare providers to understand their most pressing challenges before designing solutions to solve business problems. Adept empowers hospitals and healthcare providers to make the most of their IT investments by helping ensure compliance, improve access to data, and reduce cost.

### Centralized Processing

Map and exchange data collected from numerous distributed points of care, leveraging the core integration platform to confidently communicate patient data in the correct formats.

No matter where messages originate, whether from Point of Care A to Point of Care Z, Intelligent Gateway ensures that each message is processed at a central location. No more transformation logic scattered from site to site within a referring community.

At your central location, patient data is collected, automatically transformed into your desired formats, and communicated to and from the necessary back-end applications.

From data communication to transformation to integrated exchanges, the complete process is monitored proactively and intelligently - allowing you to productively maintain and manage service levels.

### Connect Quickly to EMRs

Use Intelligent Agent at remote locations to easily retrieve and send patient data, rapidly expanding your points of care network.

Intelligent Gateway makes it simple to add new remote sites to your network. Install the Intelligent Agent and configure it to connect to an EMR, Practice Management System, or any other clinical information system at the point of care location.

The Intelligent Agent initiates all information flow to a central location, virtually eliminating the need to alter firewall configurations at remote locations.

Intelligent Agent allows you to easily exchange encrypted patient data quickly and securely with any remote application and at any provider location with enhanced patient safety.

You'll get timely patient data delivered when you need it.

### Utilize Secure Web Services

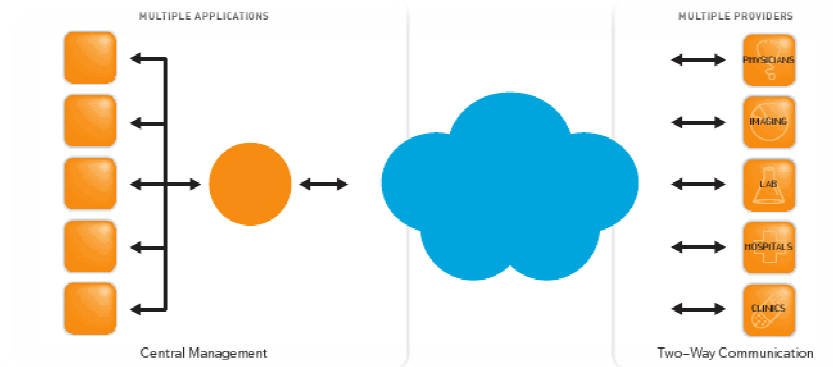

Eliminate VPN hassles using a secure web services approach. IntelligentGateway offers scalable anywhere-anytime integration to various remote points of care locations, efficiently and securely exchanging patient data.

VPNs are often the primary communication method for interfacing with remote applications. The VPN approach can involve time-consuming maintenance and monitoring.

## A New Approach to Connectivity

Today's expanded connected care initiatives and escalating EMR adoptions are requiring healthcare providers to manage hundreds of connections to imaging centers, clinics, laboratories and other point of care organizations creating an unmanageable, resource-intensive VPN-based model.

A new approach is necessary.

IntelligentGateway offers a painless and effective way to maintain connections with many points of care, by offering seamless communication via the secure IntelligentAgent and the central IntelligentGateway server anywhere at anytime.

This innovative approach leverages a web services model and confidently delivers communication in a more manageable manner.

### Protect your patient data and ensure compliance

- ✦ Comply with laws and regulations regarding patient privacy and protected health information under HIPAA
- ✦ Reduce data loss of sensitive and private patient information and intellectual property
- ✦ Mitigate compliance risks from multiple state data laws

### Enhance patient care

- ✦ Provide better care with easy and rapid access to critical information
- ✦ Bring new employees onboard quickly with proper access to systems they need to do their jobs
- ✦ Easier and faster help desk provisioning and password resets
- ✦ Improved customer satisfaction in portal services via self-service management and single sign-on authentication
- ✦ Faster on boarding of employees

### Reduce IT costs

- ✦ Server and storage consolidation reduces footprint in tight data centers
- ✦ Reduced power requirements
- ✦ Reduced need for cooling further cuts costs
- ✦ ROI Tools helps you assess savings before beginning project
- ✦ Increased CRM efficiency
- ✦ Reduced cost of directory migration

Healthcare providers need a secure, reliable, and auditable platform to manage access and identity. An identity management solution from Adept will reduce costs and frustrations associated with accessing applications and services to the users of your organization. Based on broad experience working closely with both providers as well as payers, our experts can deliver significant implementation experience in all aspects of healthcare operations, including identity management, access to healthcare systems, enterprise applications for human resources, finance and clinical systems, and single sign on.
